

ML Projects (CS) – Milestone 2

The objective of the projects is to prepare you to apply different machine learning algorithms to real-world tasks. This will help you to increase your knowledge about the workflow of the machine learning tasks. You will learn how to apply pre-processing, feature engineering, regression, and classification methods.

- **Delivering Milestone 2: Practical exam.**
 - You must deliver a detailed report **for milestone 2** contains all your work in this phase. Combine both reports and deliver a complete report for the project (Hardcopy).
 - Each team should work on their project's updated dataset for milestone 2. The **updated dataset for each project** can be found [\[here\]](#)
 - **In the practical exam:**
 - We will give you two unseen test sets, **one for regression and one for classification.**
 - In case of the movies dataset you will receive three csv files for regression and three csv files for classification
 - Make sure you **save your trained model** and create a test script that takes the new csv file, **loads the saved models**, and outputs predictions. This is to allow us to test your model without re-training.
- Hint 1:** You can use libraries such as 'pickle' to save and load your models.
- Hint 2:** Any model that you need to 'fit' during training means you need to save it and reload it for the test to work correctly.
- You should be able to handle missing values for features in a test sample. (You can't drop an entire test sample row).

- You must Show the MSE and R2 score of the regression models and the classification accuracy of each classifier on the test set.
- Each team member will be graded individually according to their response to the oral questions related to their project.

➤ In the second milestone, you will apply the following: -

Classification:

- Split your dataset into 80% training and 20% testing.
- Train at least 3 models to classify each sample into distinct classes.
- Choose at least two hyperparameters to vary. Study **at least three different choices** for each hyperparameter. When varying one hyperparameter, all the other hyperparameters should be fixed.

Milestone 2:

➤ Classification and Hyperparameter tuning.

Milestone 2 Report Must Include:

- ❖ Summarize the **classification accuracy**, **total training time**, and **total test time** using three bar graphs.
- ❖ Note that your **Feature Selection** process may differ in this phase (classification) than the previous (regression), If so, explain your feature selection process and how it was proved or disproved.
- ❖ Explain in details how **hyperparameter tuning** affected your models' performance.
- ❖ Finally, write a **conclusion** about this phase of the project and what intuition you had about your problem and how it was proved/disproved.

Project(1): Player Value Prediction

An **updated dataset** will be provided for each project in the second milestone.

Updated Dataset Description:

- The “**value**” column used in the previous milestone as the actual output has been removed.
- A New “**PlayerLevel**” column has been added instead. Each player can have a level that is either {S, A, B, C or D}.

Milestone 2 Task:

Classify a player into one of five levels: S, A, B, C or D based on the provided features in **the updated dataset**.

Project(2): **Movie Revenue Prediction**

An **updated dataset** will be provided for each project in the second milestone.

Updated Dataset Snapshots:

Updated Dataset Description:

- The “**revenue**” column used in the previous milestone as the actual output has been removed.
- A New “**MovieSuccessLevel**” column has been added instead. Each movie can have a success level that is either {S, A, B, C or D}.

Milestone 2 Classification task:

Classify each movie (row) into one of five categories {S, A, B, C or D} based on the provided features **in the updated dataset**.
